rolling bhabha issues – problems, solutions, plans

- see also last slide of talk from EMC Session Elba
- memory problem during merging of selected bhabha events solved by David Lange ➔ new class written ➔ checks ok
- new problem (since ~ end of May):
  - calibration crashes when accessing EmcStatus information
  - no event-information available in the finalizer
  - problem has been fixed a few days ago
  - at the moment tests are running ➔ consistency
  - upload into CVS and hopefully included into next releases
- plans:
  - use the modified module asap
  - validation period ~ several months
rolling bhabha issues – problems, solutions, plans

- still to do:
  - how can one dataset be selected and read out?
  - modifications in the writeout module
  - any other suggestions/remarks?
