

Focus on Safety Brainstorming Notes

Department / Dept. Manager: BaBar Collaboration/Hassan Jawahery & Bill Wisniewski

Directorate PPA/EPP David MacFarlane

Date July 20, 2007

Issue Identified	Possible Solutions
Ergonomic Evaluation – when User called to request was told that the Medical Dept only gives them to employees & temp employees.	Will research and see when and why Users can no longer get the evaluations. Will send email to collaborators about resolution
Lifting of liquid filled containers	Team lifting, smaller bottles, engineering use of special dolly that lifts & pours from bigger container to smaller containers, & straps. Understand and do not lift beyond your capacity.
Change out of water bottles on chillers – pouring water everywhere	Velcro straps that act like handles & there is a valve that fits on top of the bottle which eliminates leakage when tipping the bottle. Don't loose concentration. Look into a new vendor who supplies smaller bottles with handles and are rectangle in shape.
Adjusting ceiling vents	Don't stand on chairs or desks. Get a stick. Get a ladder (which requires ladder training, we will look into a more general ladder training of BaBar Users). Call HVAC staff to make an adjustment.
Method of reporting hazards	Need instructional training on how to use the Remedy system.
It is very difficult to find information in the ES&H web pages	Recommend ES&H rework their pages to be more user friendly
IR2 response to Grass Fires – smoke will suck down either end of pit setting off the vesda system & the fire alarm which calls to evacuate the building. Possibility of walking into a fire when evacuating the building.	In the future MCC has been instructed to keep BaBar shifters in the loop of what is going on & where. Fire Marshall instructs to leave the building but do not go near the burn. Fire Dept does have access to pass through the LCLS construction fences. There is a plan in place.
Is there a BaBar hypernews for Safety	Set one up
Walking along the loop road is dangerous – assumes you will walk on the road	Install sidewalks Pay attention when walking along there Know where the cars are
Would like an industrial first aide kit in the ROB building accessible to everyone	Need to understand the ramifications to remedy this request. Will research.
