

Flavor Physics & CP Violation

FPCP 2012 May 21-25, 2012, University of Science and Technology of China, Hefei

The aim of the conference is to discuss experimental and theoretical developments related to the physics of heavy flavors and CP violation. Among the topics included will be CP violation, rare decays, flavor beyond the standard model and at the energy frontier, spectroscopy, CKM elements, neutrino physics, and the potential for studies of heavy-flavor decays to help unravel any new physics seen directly at LHC.
