

12–14th December, Barbican centre

Invited Talks

M. Archidiacono (RWTH Aachen University)	pg. 4
<i>Neutrino properties from cosmology</i>	
L. Marti Magro (ICRR University of Tokyo)	pg. 13
<i>Supernovae in SuperK-Gd and other experiments</i>	
K. Meagher (Université libre de Bruxelles)	pg. 22
<i>Neutrino astronomy with IceCube and beyond</i>	
M. Martini (ESNT, CEA, IRFU)	pg. 32
<i>Status and challenges of neutrino cross sections</i>	
Y.-T. Tsai (SLAC)	pg. 41
<i>MicroBooNE and its cross section measurements</i>	
Y. Nagai (University of Colorado Boulder)	pg. 54
<i>Hadron production experiments</i>	
K. Duffy (University of Oxford)	pg. 63
<i>Current status and future plans of T2K</i>	
E. Ciuffoli (IMP/CAS)	pg. 72
<i>Statistical methods for the neutrino mass hierarchy</i>	
L. Lyons (Imperial College)	pg. 81
<i>Summary of the recent PHYSTAT-ν workshops</i>	
L. Manenti (University College London)	pg. 89
<i>ProtoDUNEs</i>	
M. Yokoyama (University of Tokyo)	pg. 98
<i>The Hyper-Kamiokande experiment</i>	
C. Hagedorn (University of Southern Denmark)	pg. 107
<i>Theories of leptonic flavor</i>	
J. Lopez-Pavon (CERN)	pg. 116
<i>Non-Unitarity vs sterile neutrinos at DUNE</i>	
N. Rius (IFIC, Valencia)	pg. 126
<i>Atmospheric neutrinos and new physics</i>	
A. Palazzo (University of Bari and INFN)	pg. 135
<i>Short- and long-baseline sterile neutrino experiments</i>	
C. Buck (MPIK, Heidelberg)	pg. 144
<i>Sterile neutrinos: reactor experiments</i>	
P. Mermod (University of Geneva)	pg. 152
<i>Right-handed neutrinos: the hunt is on!</i>	
W. Maneschg (MPIK, Heidelberg)	pg. 162
<i>Present status of neutrinoless double beta decay searches</i>	
S. Di Domizio (INFN, Sezione di Genova)	pg. 171
<i>Future prospects for neutrinoless double-beta decay</i>	
G. M. Pruna (Paul Scherrer Institut)	pg. 180
<i>Charged lepton flavour violation</i>	
Y.-L. Zhou (IPPP, Durham University)	pg. 189
<i>Flavour symmetric connections with CLFV</i>	

Poster Presentations

F. Pupilli (INFN Padova)	pg. 198
<i>The ERC ENUBET Project: high precision neutrino flux measurements in conventional neutrino beams</i>	
E. Drakopoulou (University of Edinburgh)	pg. 203
<i>Machine learning-based energy reconstruction for Water-Cherenkov detectors</i>	
L. Patrizi (INFN, Bologna)	pg. 209
<i>Results from the OPERA experiment</i>	
A. Olivares del Campo (IPPP, Durham University)	pg. 215
<i>Phenomenology of a neutrino-DM coupling: the scalar case</i>	
C. Riccio (INFN and University of Naples)	pg. 220
<i>Muon antineutrino charged-current cross sections without pions in the final state at T2K</i>	
A. Branca (INFN, Sezione di Padova)	pg. 225
<i>The CUORE experiment at the LNGS</i>	
J. Turner (IPPP, Durham University)	pg. 230
<i>Creating the baryon asymmetry from lepto-bubbles</i>	
E. Saul-Sala (Universidad de Valencia)	pg. 236
<i>Radiative decay of heavy neutrinos at MiniBooNE and MicroBooNE</i>	
S.-F. Ge (MPIK, Heidelberg)	pg. 241
<i>Measuring the leptonic Dirac CP phase with TNT2K</i>	
F. Björkeröth (University of Southampton)	pg. 246
<i>Towards a complete $\Delta(27) \times SO(10)$ SUSY GUT</i>	
G. Prior (LIP)	pg. 251
<i>The SNO+ experiment physics goals and backgrounds mitigation</i>	
P. Hallsjö (University of Glasgow)	pg. 256
<i>BabyMIND: a magnetised spectrometer for the WAGASCI experiment</i>	
L. Arnold (University of Bristol)	pg. 261
<i>Trigger for the SoLid reactor antineutrino experiment</i>	
E. Turner (University of Oxford)	pg. 269
<i>Commissioning of ELLIE for SNO+</i>	
J. Migenda (University of Sheffield)	pg. 274
<i>The Hyper-Kamiokande experiment: overview & status</i>	
S. Parsa (University of Geneva)	pg. 279
<i>Baby MIND experiment construction status</i>	
C. Patrick & F. Xie (University College London)	pg. 284
<i>Status of the SuperNEMO $0\nu\beta\beta$ experiment</i>	
B. Liggins (QMUL)	pg. 289
<i>SNO+ commissioning status</i>	
M. Hostert (IPPP, Durham University)	pg. 294
<i>Light sterile neutrinos at νSTORM: decoherence and CP violation</i>
