

## **MCC SCP and E166 DAQ Notes**

S. Berridge and J. C. Sheppard, Update: 6/30/04

### **To start SCP from an Onsite XP machine: X-Win32**

X-Win32: slc.slac.stanford.edu

*userid*

*password*

Launch SCP from Application drop down menu

Accept all offers, a series of popups (at least 3, maybe 4) appear asking if you accept the connection to mcc

### **To start SCP from an Onsite XP machine: SSH**

Start X-Win32 (or equivalent) on your machine

SSH to mcc.slac.stanford.edu, enter *userid* and *password* as required

At prompt: MCC> type *scp*

You will be asked to id yourself (enter *userid*) and to enter a session type. Carriage return to see options (I use *XT* or *XB*)

### **To start SCP from an Offsite XP machine: VPN**

VPN to SLAC

X-Win32: slc.slac.stanford.edu

*userid*

*password*

Launch SCP from Application drop down menu

Accept all offers, a series of popups (at least 3, maybe 4) appear asking if you accept the connection to mcc

### **To start SCP from an Offsite machine XP or MAC: SSH**

Start X-Win32 (or equivalent) on your machine.

Add mcc-lavc.slac.stanford.edu and localhost (or 127.0.0.1) in your X-Win32 configuration, securities tab (X-Host list).

In Terra Term (ttssh), setup, SSH forwarding, you must check the 'display remote X apps on local X server' in the X forwarding box.

SSH to mcc-lavc.slac.stanford.edu, enter *userid* and *password* as required

At prompt: MCC> type *scp xt* (or *xb*)

You will be asked to id yourself (enter *userid*)

### **To read BPMs or TOROs (3/17/04):**

SCP comes up on **PEP-II index**

Push **FTTB Index**

Push **BPM Device Panel**

Push **FTTB (SLC) BPM Measurement Definitions**

Push **Device** and select **TORO**

Push **BPM Values Disply**

Push either **Start/Stop** or **Single Shot** buttons

**Triggers (3/18/04): Call MCC before changing values, call when done**

SCP comes up on **PEP-II** index

Push **FFTB Index**

Push **FFTB TRIGS Panel**

Push **CB02 TRIG Panel**

Enter **Beam Prompt** (use **3**); note if have looked at BPMs then beam prompt is likely already set.

Select a trigger (try **TRG806 E144 CCM**)

Push **Timing Data Disply** to see trigger values

Change trigger setting by either assigning to a **Knob** or via **ENTER TDES**; note that units are **ns** and range is **-1000000 to 1600000**.

**E166 DAQ Data Storage Location (6/2/04)**

E166 DAQ write data to: `/afs/slac.stanford.edu/g/e166/data`

**Mapping E166 Data Storage Location to XP (6/2/04)**

Right click My Computer

Enter Drive (**T:**) Letter

Enter folder: `\\slaccfs\slac_afs\g\e166`

Click Reconnect at Login

Do NOT login as a different user
