

Wednesday, Nov. 6th, 10:00 am, Alexander Room in B280.

AGENDA

1. **CD2A goals.** Please review the goals as compiled at last week's meeting and bring corrections and additions to the meeting. (See file 021030CD2AGoals.doc in Drop Boxes/Clendenin directory and attached here.)
2. **Drawings exercise.** For CD2A, we will compile a list of existing drawings of components we will use in the injector. Information should go on lines added under the appropriate WBS number on the Inj_TEC.mpp file, which you can find in the Injector TEC folder of the Drop Boxes/Clendenin directory. Bring at least one example to the meeting so we can discuss procedures, problems, etc. At the meeting we will set goals for completing this compilation task.
3. **RF prototyping including RF FF and stable RF source.** Akre and Schmerge will describe the two prototyping programs and outline the schedule for FY03.

Note 1. My compilation of long lead items (021101LongLeadItems.xls) can be found also at Drop Boxes/Clendenin. We will not discuss the list this week, but if you want to suggest changes now, please put them in your subgroup input folder and alert me by email. (The one missing item I know of is \$100K for the radiation wall.)
