SLAC SPIRES HEPNAMES database search

Use standard SPIRES search terms such as...

```
find name berners-lee  
find name Jones  
sho filesize  
explain hepnames
```

# HEPLIB

The first HEPLIB user's meeting was held at the SSC Laboratory, Dallas, Texas, September 19-20, 1991. Fifty-four scientists from thirty-one High Energy Physics research institutes and universities met for two full days to discuss the support and environments of High Energy Physics computing and to form and define the scope of a HEPLIB Users Group.

## Objectives

There was a general consensus for the following objectives:

- HEPLIB should be world users group for enhancements, communications, and distribution of software in the HEP computing environments.
- HEPLIB will collect, maintain, document, and distribute shareable application software for HEP computing as well as non-HEP applications, including code management systems in heterogeneous environments, data base systems, and automatic installation and test procedures. (See FreeHEP).
- HEPLIB should promote and recommend industry, as well as HEP computing standards as appropriate, including operating systems, distributed computing environments, quality assurance, version control, and information exchange.

A steering committee was formed to plan subgroups, initiate exchange and communication, plan logistics, arrange for meetings, begin planning for a HEPLIB Newsletter, and look into questions of manpower and funding for the HEPLIB Users Group.

## Contacts

Initially, the following addresses may be used to contact the HEPLIB User Group :

Miguel Marquina  
CN Division  
CERN  
CH-1211 Geneve 23

# SLAC World Wide Web Information

The SLAC World Wide Web (WWW) service provides access to a wide range of information from a variety of sources both at SLAC and elsewhere. Information is provided in the form of hypertext which allows users to follow pointers from one item to other related items, and thus to access the information they need in a simple intuitive manner. Information is accessed using the TCP/IP network and can actually reside anywhere in the world, although the user does not need to know where the information comes from.

A number of different programs (called browsers) are available to access WWW information for different platforms including VM, VMS, Unix and NeXT.

## SLAC information

### SLAC SPIRES

Information is available on SLAC people (BINLIST), HEP people (HEPNAMES), HEP publications, as well as many additional topics.

### Seminars

Seminars at SLAC and nearby, today, tomorrow, this week, next week, anytime.

### SLD

Information specific to the SLD experiment.

### FreeHep

Information on software available from HepLib.

## Other Information

See also HEP information( CERN, DESY etc.), academic information, APS News.

## Support

The WWW at SLAC is supported by the SLAC WWWizards, to whom questions - comments - complaints etc. should be addressed. The WWW project was initiated and is supported by a group based chiefly at CERN.

## STORES: Stores Online Catalog Search Facility

Use the STORES command to search the Online Stores Catalog for catalog numbers, descriptions, prices, units of issue, and quantity balances (SLAC EXEC). This command does not replace existing ordering procedures.

### Syntax:

```
+-----+
| [function] value
|
| Functions:
|
| ALLDes allows any search word(s)
| -----
| FAMDes requires Family Description search word(s)
| ITEMDes requires Item Description search word(s)
| ALLNum requires Catalog Identifier number
| FAMNum requires Catalog Identifier number
| ITEMNum requires Catalog Identifier number
| SPCode requires Spare Parts Code
+-----+
```

### PARM:

function determines what portion of the Catalog will be searched (family, stock item or both), and how the Catalog will be searched (by Description or Catalog Identifier number). The following are valid functions:

**ALLDes** displays both the family description and stock item catalog numbers that match the description search word(s) given in "value." Unit of issue, issue price, and balance on hand, are included for stock items.  
**EXAMPLE:** ALLDES OIL CUTTING

**FAMDes** displays all family catalog numbers and their descriptions that match the family description search word(s) given in "value." This function provides a display similar in content to the printed Stores Catalog index.  
**EXAMPLE:** FAMDES PIPE

**ITEMDes** displays all stock item catalog numbers that match the item description search word(s) given in "value." The output also includes unit of issue, issue price, and balance on hand.  
**EXAMPLE:** ITEMDES PENCIL BLACK | PENCIL BLK

**ALLNum** displays both family description and stock item catalog numbers that match the catalog identifier number given in "value." Unit of issue, issue price, and balance on hand, are included for stock items.  
**EXAMPLE:** ALLNUM 68

**FAMNum** displays all family catalog numbers and their descriptions that match the catalog identifier number given in "value."  
**EXAMPLE:** FAMNUM 55

**ITEMNum** displays all stock item numbers that match the catalog identifier number given in "value." The output also includes unit of issue, issue price, and balance on hand.

EXAMPLE: ITEMNUM 684

SPCode displays both family description and stock item catalog numbers that match the spare parts code given in "value." Unit of issue, issue price, and balance on hand, are included for stock items.

EXAMPLE: SPCODE A099

value is the search term and may contain a catalog description search word(s), optionally combined by search qualifiers, a catalog identifier number, or a spare parts code, depending on which function is specified.

SEARCH WORD(s): (For ALLDes, FAMDes, and ITEMDes Functions)  
----- -----

Search words are words contained in either the family description or stock item description, such as PENCIL BLACK MECH. They must be separated by blank spaces and may be combined with search qualifiers.

See Note 2 for important considerations in utilizing the Stores Online Catalog.

Search qualifiers are used to limit or expand a search. A blank space between two search words represents a logical AND, for inclusion purposes. The most useful qualifiers are as follows:

.fo off

| Search Qualifier | Abbreviation | Example of Value  |
|------------------|--------------|---|
| AND NOT          | &            | PENCIL BLACK &^ PENCIL MECH   |
| OR               |              | PENCIL BLACK   PENCIL BLUE  |
| STRING           |              | STRING OLD would find all descriptions with words containing the string OLD, such as HOLD, HOLDER, etc. |

Truncated searches may be accomplished by suffixing a star '\*' to search word(s). In the following example, all words beginning with PEN BL and ME would be found.

EXAMPLE: PEN\* BL\* ME\*

Also, compound searches can be done.

EXAMPLE: PENCIL RED | PENCIL BLUE &^ PENCIL MECH

See Note 4 for further information concerning search qualifiers.

CATALOG IDENTIFIER NUMBER:  
----- -----

For ALLNum and FAMNum Functions:

A catalog number contains either 10 characters (general stores, metal stores) or 14 characters (spare parts). See Note 1, below.

A catalog identifier number is the stem of a catalog number, from 2 to 8 digits which may represent:

GROUP (2 digits), such as 55, or  
CLASS (5 digits), such as 55200, or

FAMILY (8 digits), such as 55200600.

Group 59 is too large a class to display and may therefore not be specified as a catalog identifier number.

Three or more digits may also be entered to further slice groupings, such as 553, or 552006.

Catalog Identifier Numbers may be entered with or without dashes or blanks separating Group, Class, Family, etc., such as 55-300-020, 55 300 020, 55300020.

For ITEMNum Function:

In addition to the above, a complete catalog number, up to 14 digits, may be given, such as 5323000105, or 5930120001A002.

SPARE PARTS CODE:  
-----

The Spare Parts Code is an owner group identification code for spare parts maintained by SLAC Stores. This code may be used only with the SPCode function, and consists of 4 characters, such as A048, A099. Optionally, the first character, "A" may be omitted.

#### NOTES:

##### Note 1: GENERAL DESCRIPTION OF THE STORES CATALOG

The Stores Catalog contains descriptions of over 9000 stock items, including general stores items, metal stores items, and spare parts. All of these items are arranged or subdivided by group, class, family, and item, as follows:

|               |  |
|---------------|--|
| 55-300-020-06 | LUMBER, FIRE-RETARDANT, CONST.GRADE S4S, 2X4 CONST.FIR |
|               | Description  |
|               | -----  |
|               |  |
|               | ITEM: 2X4 CONST.FIR, FIRE RETARDANT                    |
|               | FAMILY: LUMBER, FIRE-RETARDANT, CONST.GRADE S4S        |
|               | CLASS: [Fire Retardant Lumber and Plywood]             |
|               | GROUP: [Lumber and Building Materials]                 |

Thus, in the example above, the catalog group would be 55, the catalog class would be 55-300, the catalog family would be 55-300-020, and the catalog item or catalog stock number would be 55-300-020-06.

For spare parts, a 4 character suffix is included for both family and catalog items, such as 31-300-001-08A099.

Searchable descriptions exist at the FAMILY and ITEM levels. Notice from the above example that Lumber appears in the FAMILY description but not in the ITEM description, and that 2X4 and Fir appear only in the ITEM description and not the FAMILY description. Using ALLDes, FAMDes, or ITEMDes you can search both descriptions, or only family descriptions, or only item descriptions.

Once you know the group, class, or family identifier numbers, you can then use FAMNum to display all family descriptions within a class or group. Use ITEMNum to display all items within a family or class. Or, you can use ALLNum to display both family descriptions and items within a family or class.

Note from the above that using more than two specific words in FAMDes may prove to be misleading because most family descriptions are general rather than specific. Using ALLDes or ITEMDes (rather than FAMDes) will yield more satisfactory results for very specific word searches, such as ALLDES PENCIL BLACK MECH THIN.

It is important to be aware of the fact that description words and catalog identifier numbers cannot be mixed in any of the Stores functions.

In using search word(s) it is important to note that for most stock items, the descriptive word(s) are singular rather than plural. Searching on PENS or PENCILS will return a message that no descriptions were found. Searching on PEN or PENCIL would return many descriptions. Searching on COLORS, however, would return several descriptions, mostly those containing the word ASSORTED.

See Note 2 for significant considerations in using the Stores Online Catalog.

Occasionally during FAMDes or FAMNum displays you may notice two identical family identifier numbers with similar or identical descriptions. This is due to spare parts family identifiers additionally containing a 5 character spare parts owner code, which is not displayed during FAMDes or FAMNum displays. Executing a ALLDes or ALLNum display for the same search term will show you both numbers. For the sake of displaying the maximum length of description possible in the FAMDes and FAMNum displays, the '00' suffix (which would otherwise be Item above if it were not a family description) as well as any spare parts code, has been dropped. In the ALLDes and ALLNum displays a non spare parts family description also has the '00' suffix dropped to further distinguish family descriptions from item descriptions, but spare parts family description identifier numbers are completely displayed.

To see both family and item descriptions for a particular spare parts code, use the SPCode function, such as STORES SPC A099.

Suggestions and comments concerning the content of the Stores catalog may be directed to the following individuals, in the order given:  
Lillie Copeland, X4253; Thomas Butler, X3759; Bob Ratko, X4107;  
Jerry Belk, X2484.

#### Note 4: SEARCH QUALIFIERS

Stores search qualifiers are relational operators identical to those used in the SPIRES database language for searching indexes. With the exception of STRING, PREFIX, and SUFFIX, most may be of little use for searching the Stores Catalog description field because of the way in which the descriptions are indexed. All descriptions are broken into words at every occurrence of (.,/:=-'). Also, no integer values appear in any description, only string or character values. Thus, equality, inequality, word, with, and having operators may be in many instances of little or no value. Because of the composition of the Stores

Function statement, no parentheses are allowed within Value. For more information concerning SPIRES index searching, see Sections B.3.2.3 and B.3.3.1 of the SPIRES Searching and Updating Manual.

EXAMPLES:

1. For many items, the default function ALLDes will suffice to find your goal. To find 1/2" magic mending tape, for instance,  
Enter: MAGIC MENDING TAPE  
This would show you that 2 sizes are available, including your goal.
2. However, due to the way family and item descriptions are frequently constructed, it may take several commands to find your goal. Suppose you were interested in finding out the availability of aluminum electrolytic capacitors with WVDC of 15 rated at 21000 MFD. One satisfactory approach would be to do the following:  
Enter: STORES CAPACITOR ALUMINUM ELECTROLYTIC  
This reveals that there are 7 families. To save the time it would take to look through all of those families and potentially pick up all sorts of non-interest items, one might instead try:  
Enter: WVDC 15 21000 MFD  
This yields one item which may or may not be a capacitor of aluminum construction within the electrolytic category, so, to check that possibility we  
Enter: ALLNum 59312909  
which verifys that the previously displayed item was, in fact, a capacitor aluminum electrolytic WVDC 15 2100 MFD.

Wish list of WWW questions/concerns for Bebo to investigate/work on while at CERN. Items are NOT prioritized! WWW Wizards should feel free to add to this list as necessary.

- 1) what are possibilities of fullscreen (i.e., not linemode) support for a browser on VM?
- 2) what continuing support is there for X-windows?
- 3) what work is being done for a Macintosh browser?
- 4) there is a need for comprehensive documentation; especially a conceptual overview.
- 5) is it possible to track inquiries with a finer granularity than IP address (i.e., user)?
- 6) possible changes in the software design to eliminate "hard-coded" parameters (e.g., addresses); something conceptually like GLOBALV.
- 7) possible changes in the software design to eliminate excessive openings/closings of TCP/IP connections.

# The SLAC WWWizards

Support for the WWW service at SLAC is currently being provided by the WWWizards who are:

- Louise Addis
- George Crane
- Tony Johnson
- Bebo White
- Joan Winters

Feel free to contact one of the above with any problems, suggestions etc.

The WWW was originally installed at SLAC by Paul Kunz and Terry Hung.

# The SLAC WWWizards

Support for the WWW service at SLAC is currently being provided by the WWWizards who are:

- Louise Addis
- George Crane
- Tony Johnson
- Bebo White
- Joan Winters

Feel free to contact one of the above with any problems, suggestions etc. which are not already on the to-do list.

The WWW was originally installed at SLAC by Paul Kunz and Terry Hung.

## RECOVER

# SLAC WHEREIS

Gives information about VM userids, workstations, printers, cables, ports, catalogued tapes, property control numbers, and HEP institutions.

## PCNUM

Purchase and nodename information (if known)

## NODE

Database info based on nodename

## ETHER

Name of node with given hardware or software address

## TAP

provides segment and nodename information

## DEVICE

provides info based on physical device address

## MICOM

provides data on given Micom channel address

## PORT

provides data on given port address

## CABLE

provides data on given cable number

## PRT

provides info on local or remote RSCS printer

## VOLSER

provides tape location and various other info

## INSTITUTION

provides database info on given HEP site

## SUMMARY

Ethernet, Computer, & Network Device Summary

## HELP

Additional information about Whereis
