Welcome to SLAC

The Stanford Linear Accelerator Center (SLAC) is a national basic research laboratory, probing the structure of matter at the atomic scale with x rays and at much smaller scales with electron and positron beams. The laboratory is operated by Stanford University under a contract from the United States Department of Energy (DOE).

The combined staff is currently about 1300, 150 of whom are Ph.D. physicists. Typically 800 physicists from universities and laboratories around the world participate in the high energy physics program and 800 scientists from universities and industrial laboratories are active in the synchrotron radiation program.

Upcoming SLAC-sponsored Conferences, Workshops, and Meetings

- 1998 Klystron-Modulator Workshop: Development of ILC Modulator Components and Modulators for L, S, and X Band Klystrons, June 29-July 2, 1998
- Sid Drell Symposium, July 31, 1998
- XXVI SLAC Summer Institute on Particle Physics -- Gravity: From the Hubble Length to the Planck Length, August 3-14, 1998
- International Computational Accelerator Physics Conference 1998 (ICAP'98), September 14-18, 1998, Monterey Conference Center, Monterey, California, USA

For information on other upcoming physics conferences, check the SPIRES Conferences database

Announcements

29 May 98 QuickNews for May 29, 1998

22 May 98 Last Call for Retrieving Data Archived from VM

- **SLAC Research**

High-energy, particle, and synchrotron radiation physics; accelerator physics; accelerator operations; and theoretical physics; *e.g.*, *BABAR*, *SLD*, *SSRL*, *PEP-II*, and *Theoretical Physics*.

- **Information from SLAC (including SPIRES Databases)**

Information for users worldwide, such as jobs, directories, databases, calendars, publications, and software, *e.g.*, *SPIRES-HEP*, *Today's E-Prints* and *FreeHEP*.

- **SLAC Computing and Communications**

Computing resources, services, and plans; networking; and telecommunications; *e.g.*, *Platforms*, *Computer Networking*, and *Emergency Communications*.

- **SLAC Institutional Information**

Site information; internal publications and communications; administrative tools; and library; *e.g.*, *Seminars*, *Requisition Status**, and *Bulletin Board*.

- **SLAC Divisions, Groups, & Programs**

Main organizational units, offices, and outreach efforts, *e.g.*, *Environment, Safety, & Health*; *Technical Publications*; and *Education*.

- **Useful Information Elsewhere**

HEP experiments and institutions; professional societies; DOE and other federal, state, local, and networked resources; *e.g.*, *Experiments Online*, *APS's What's New*, and *DOE*.

* Access to this link is restricted to users in the SLAC NT domain.

Phone Directory: Search Form

[SLAC Welcome](#)[Highlighted Home](#)[Detailed Home](#)[What's New](#)[Search](#)[Phonebook](#)

This fill-out form can be used to search the SLAC phone directory (also called BINLIST). Fill in the entries you know, leave others blank. Family name, First name and E-mail ID will support truncated searches, e.g. *john**. You may also find SLAC FAXes or other "non-people" through Family name. See **Help**. To search, click on the "Perform Search" button below.

Family name: First name:
E-mail ID: SLAC Extension:

[Perform Search](#)[Clear Form](#)

If your browser doesn't support the forms-search, do the old-fashioned search.

Note - this form only searches for people who work with the Stanford Linear Accelerator Center. If you need to search further, try more phone directories.

SLAC users may also find printing the SLAC phone directory* useful. For more information about SLAC's telephone system including *ATOMs*, see the *Telephone Users' Guide*.

If you find incorrect or incomplete information in the database, contact the ATOM or Group Secretary for that person or location. If the ATOM listed is no longer current, contact Rose Rafael. If the person does not have an ATOM or you cannot determine one, contact Barbara Johnson+.

* Access to this link is restricted to users on SLAC computers.

+ In Barbara's absence, you may send email to [Tineke Graafland](#).

SLAC ARCHIVES COLL

SERIES SUBSERIES

BOX FOLDER

Conversation with Paul Kunz 1/27/99

High Energy Physics was really involved in breaking down international barriers to telecommunications. Should talk to David Lord (7/96 email address: david@exchpb.central.co.th), was head of consortium of academic institutions called European Academic Research Network (EARN). That consortium fought the PTTs (Postal Telephone and Telegraph? Companies) in Europe, who originally did not want the kind of networking that we have now.

In Europe, "third-party" connections were illegal, unless the third party was a PTT. BITNET was the wedge that broke the PTT's hold. (was IBM software protocol but was not proprietary/secret, because of anti-trust rules). First Italy allowed 3-rd party lines, the Israel. Israeli academics were very interested in being connected to their international colleagues electronically, since they were "surrounded by hostile neighbors and the Mediterranean sea." Southern France and Spain began to allow 3rd party connections soon after... Germany wouldn't allow, & Switzerland did whatever Germany did.

Early days of internet came out of computer science, not hep

DEC VMS could join BITNET because of a Penn State student who wrote a protocol. There is an article by John S. Quarterman about the early history of networking in "SunExpert" or "AIXExpert" but he didn't cover the European politics side.

Amsterdam Conference would show state of thinking at that time (1987 Computing In High Energy Physics)

Has photocopy of order from CERN for an emulator, the first one SLAC ever built for any other lab. SLAC emulators were used on the experiment at CERN that won Rubbia his Nobel. (NOTE: ASK FOR A COPY !!)

Paper by Tim Berners-Lee et al, World-Wide Web: An Information Infrastructure for High-Energy Physics. When the paper was given, the connection to SLAC was demonstrated and the reaction of the audience was electric: it was a live connection to HEP and it was very fast. HEP was a database everyone knew about and wanted access to, and they were astonished at how fast the connection was. Not Paul, though, he knew it was fast. But the others at the Session were visibly impressed.

Paul Dechen
