Contents

Part 1
SAMOILENKO A.M., Mykhailo Vasyl’ovych Ostrohrads’kyi ...................................................... 17

Symmetry of Differential Equations
HARRISON B.K., An Old Problem Newly Treated with Differential Forms:
   When and How Can the Equation \( y'' = f(x, y, y') \) Be Linearized? .......................... 27
BINDU P.S. and LAKSHMANAN M., Symmetries and Integrability Properties
   of Generalized Fisher Type Nonlinear Diffusion Equation ........................................... 36
ABD-EL-MALEK M.B., BADRAN N.A. and HASSAN H.S., Solution of the Rayleigh
   Problem for a Power Law Non-Newtonian Conducting Fluid via Group Method .......... 49
ABD-EL-MALEK M.B., BADRAN N.A. and HASSAN H.S., Using Group Theoretic Method
   to Solve Multi-Dimensional Diffusion Equation ....................................................... 57
AMDJADI F., Hopf Bifurcations in Problems with \( O(2) \) Symmetry:
   Canonical Coordinates Transformation .................................................................... 65
ANDREYTSEV A., Classification of Systems of Nonlinear Evolution Equations
   Admitting Higher-Order Conditional Symmetries ..................................................... 72
BARANNYK T., Symmetry and Exact Solutions for Systems of Nonlinear
   Reaction-Diffusion Equations .................................................................................. 80
BASARAB–HORWATH P. and LAHNO V., Group Classification of Nonlinear
   Partial Differential Equations: a New Approach to Resolving the Problem .......... 86
BURDE G.I., Expanded Lie Group Transformations and Similarity Reductions
   of Differential Equations ....................................................................................... 93
CHERNIHA R. and SEROV M., Nonlinear Diffusion-Convection Systems:
   Lie and \( Q \)-Conditional Symmetries .................................................................... 102
CHUGUNOV V.A., GRAY J.M.N.T. and HUTTER K., Some Invariant Solutions
   of the Savage–Hutter Model for Granular Avalanches ................................................ 111
CICOGNA G., Symmetric Sets of Solutions to Differential Problems .............................. 120
COTSAKIS S. and LEACH P.G.L., Symmetries, Singularities and Integrability
   in Nonlinear Mathematical Physics and Cosmology .................................................. 128
FEDORCHUK I.M., On New Exact Solutions of the Eikonal Equation ......................... 136
FEDORCHUK V.M. and FEDORCHUK V.I., On Differential Invariants of First-
   and Second-Order of the Splitting Subgroups of the Generalized Poincaré Group \( P(1,4) \) .... 140
FEDORCHUK V.I., On Differential Equations of First- and Second-Order
   in the Space \( M(1,3) \times R(u) \) with Nontrivial Symmetry Groups .............................. 145
IVANOVA N., Symmetry of Nonlinear Schrödinger Equations with Harmonic Oscillator
   Type Potential ........................................................................................................ 149
van der KAMP P.H., The Use of \( p \)-adic Numbers in Calculating Symmetries
   of Evolution Equations .......................................................................................... 151
KOTEL’NIKOV G., Method of Replacing the Variables for Generalized Symmetry
   of D’Alembert Equation ......................................................................................... 156
LAHNO H.O. and SMALIJ V.F., Subgroups of Extended Poincaré Group
   and New Exact Solutions of Maxwell Equations .................................................... 162
MAGDA O., Invariance of Quasilinear Equations of Hyperbolic Type
   with Respect to Three-Dimensional Lie Algebras .................................................. 167
MISKINIS P., New Exact Solutions of Khokhlov–Zabolotskaya–Kuznetsov Equation .... 171
POPOVYCH H.V., Lie, Partially Invariant, and Nonclassical Submodels of Euler Equations .... 178
POPOVYCH R.O. and BOYKO V.M., Differential Invariants and Application
   to Riccati-Type Systems ....................................................................................... 184
PROKHOROVA M.F., Heat Equation on Riemann Manifolds: Morphisms and Factorization to Smaller Dimension .......................................................... 194
REYES E.G., The Soliton Content of the Camassa–Holm and Hunter–Saxton Equations ........ 201
SHEFTEL M.B., Method of Group Foliation and Non-Invariant Solutions of Invariant Equations ............................................................... 215
TARANOV V., The Most Symmetric Drift Waves ............................................. 225
Tsyfra I.M., Conditional Symmetry Reduction and Invariant Solutions of Nonlinear Wave Equations ........................................................................... 229
Vladimirov V. and Skuratovskii S., On the Localized Invariant Traveling Wave Solutions in Relaxing Hydrodynamic-Type Model .................... 234
VOROBYOVA A., Transformation of Scientific System of Knowledge in Educational: Symmetry Analysis of Equations of Mathematical Physics .............................. 252
Yehorchenko I., Differential Invariants and Construction of Conditionally Invariant Equations ......................................................................... 256
ZAWISTOWSKI Z.J., Symmetries of Integro-Differential Equations ......................... 263

Solitons and Integrability

Belokolos E.D., Spectra of the Schrödinger Operators with Finite-Gap Potentials and Integrable Systems ................................................................. 273
Chou K.S. and QU C.Z., Integrable Equations and Motions of Plane Curves ............ 281
Anders I., Asymptotics of the Coupled Solutions of the Modified Kadomtsev–Petviashvili Equation .............................................................. 291
Berkela Yu., Exact Solutions of Matrix Generalizations of Some Integrable Systems ....... 296
Harnad J., Zhedanov A. and Yermolayeva O., R-Matrix Approach to the Krall–Sheffer Problem ........................................................................ 314
Hvozdova Ye., On Integrability of Some Nonlinear Model with Variable Separant ........ 321
 Fioravanti D., Aspects of Symmetry in Sine-Gordon Theory .................................. 323
Li Y., Integrable Structures for 2D Euler Equations of Incompressible Inviscid Fluids ....... 332
Oksuk G., High-Frequency Absorption by a Soliton Gas in One-Dimensional Magnet .... 339
Parker A. and Dye J.M., Boussinesq-Type Equations and “Switching” Solitons .......... 344
Sidorenko Yu.M., Transformation Operators for Integrable Hierarchies with Additional Reductions ........................................................................ 352
Skrpnyk W., On Integrable Quantum System of Particles with Chern–Simons Interaction ..................................................................................... 358
Skrpnyk T.V., Integrable Hamiltonian Systems via Quasigraded Lie Algebras ............ 364
Svinin A.K., nth Discrete KP Hierarchy .................................................................. 372
Toda K., The Construction of Alternative Modified KdV Equation in (2 + 1) Dimensions ...... 377
Vakhnenko V.O. and Parkes E.J., A Novel Nonlinear Evolution Equation Integrable by the Inverse Scattering Method ............................................ 384

Part 2

Algebras, Groups and Representation Theory

Beckers J. and Debergh N., On the Heisenberg–Lie Algebra and Some Non-Hermitian Operators in Oscillatorlike Developments ......................................... 403
KLIMYK A.U., On Classification of Irreducible Representations of $q$-Deformed Algebra $U'_q(so_n)$ Related to Quantum Gravity .......................... 407
ARZHANTSEV I.V., Invariant Differential Operators and Representations with Spherical Orbits ........................................ 419
BONDARENKO A. and POPOVYCH S., $C^*$-Algebras Associated with $F_{2^n}$ Zero Schwarzian Unimodal Mappings .......................... 425
DEBERGH N. and STANCU Fl., The Lipkin–Meshkov–Glick Model and its Deformations through Polynomial Algebras ................. 432
DUPLIJ S., Ternary Hopf Algebras ........................................................................ 439
IORGOV N., On the Center of $q$-Deformed Algebra $U'_q(so_3)$ Related to Quantum Gravity at $q$ a Root of 1 ............................ 449
KRUGLYAK S.A. and KYRYCHENKO A.A., On Four Orthogonal Projections that Satisfy the Linear Relation $\alpha_1 P_1 + \alpha_2 P_2 + \alpha_3 P_3 + \alpha_4 P_4 = I$, $\alpha_i > 0$ .................. 461
LUTFULLIN M.W. and POPOVYCH R.O., Realizations of Real 4-Dimensional Solvable Decomposed Lie Algebras .......................... 466
MAISTRENKO T.Yu., Positive Conjugacy for Simple Dynamical Systems .......................... 469
NESTERENKO M.O. and BOYKO V.M., Realizations of Indecomposable Solvable 4-Dimensional Real Lie Algebras ....................... 474
PALEV T.D., STOILOVA N.I. and VAN der JEUGT J., Jacobson Generators of (Quantum) $sl(n+1|m)$. Related Statistics ................. 478
POPOVA N., On One Algebra of Temperley–Lieb Type ........................................ 486
STRELETS A.V., On Involutions which Preserve Natural Filtration ......................... 490

Supersymmetry

NIEDERLE J. and NIKITIN A.G., Extended SUSY with Central Charges in Quantum Mechanics ........................................ 497
PLYUSHCHAY M. and KLISHEVICH S., Nonlinear Supersymmetry ................. 508
SAMSONOV B.F., Time-Dependent Supersymmetry and Parasupersymmetry in Quantum Mechanics ........................................ 520
SHIMA K., Geometry of Nonlinear Supersymmetry in Curved Spacetime and Unity of Nature ........................................ 530
GAVRILIK A.M., Quantum Algebras, Particle Phenomenology, and (Quasi)Supersymmetry ........................................ 540
RAUSCH de TRAUBENBERG M. and SLUPINSKI M.J., Fractional Supersymmetry and $F$–fold Lie Superalgebras .......................... 548

Symmetry in Physics

KELLER J., General Relativity as a Symmetry of a Unified Space–Time–Action Geometrical Space ........................................ 557
KLINK W.H., Point Form Relativistic Quantum Mechanics and an Algebraic Formulation of Electron Scattering ....................... 569
SCHMID R. and SUN Q., Relativity without the First Postulate ....................... 577
BEDRIJ O., New Relationships and Measurements for Gravity Physics ............. 589
BURBAN I.M., D-branes, B Fields and Deformation Quantization ..................... 602
CASAHORRAN J., The Euclidean Propagator in Quantum Models with Non-Equivalent Instantons ........................................ 609
GALKIN A., Equation for Particles of Spin $\frac{3}{2}$ with Anomalous Interaction ....................... 616
GLAZUNOV N., Mirror Symmetry: Algebraic Geometric and Lagrangian Fibrations Aspects .............................................623
KUCHERYAVY V.I., Symmetries and Dynamical Symmetry Breaking of General n-Dimensional Self-Consistently Renormalized Spinor Diangles ..................................................629
NAON C. and SALVAY M., On a CFT Prediction in the Sine-Gordon Model .................................................641
