Terrestrial gamma-ray flashes (TGFs) were discovered only 20 years ago by the BATSE instrument onboard the Compton Gamma-ray Observatory. Since that first discovery, it has become apparent that TGFs occur fairly frequently and are somehow linked to lightning. However, many mysteries still remain, and some would even claim that TGFs are less well understood than elves and sprites. Oh, and this talk just might feature an appearance from everyone's favorite space-based gamma-ray superhero...
