Dark Matter Detection -- In Space!
Sho Uemura

We know there's dark matter. We know it's in space! Let's look for it in space! (We will not go to space today.)

We're going to learn about the search for dark matter signatures in cosmic rays of every kind - charged particles, gamma rays and neutrinos. We'll look at experiments in space, on the ground and underground - early results, unexplained observations and wild speculation.

Kavli 3rd floor conference room  Sept. 11, 2013 12:30 pm  Pizza will be served!
